Notation and Conventions

The quantum numbers of the energy eigenstates of the non-relativistic hydrogen atom are: n (energy), l (angular momentum) and m_l (z projection of angular momentum). Otherwise stated $\langle \cdot \rangle$ means average over *energy* eigenstates.

Scales Constants and Special Values of Hydrogenoid Wave Functions

Energies for the Coulomb Potential ($V(\mathbf{r}) = -\frac{1}{4\pi\epsilon_0} \frac{Ze^2}{r}$) are $E_n = -\frac{m}{2n^2} \left(\frac{Ze^2}{4\pi\epsilon_0\hbar} \right)^2 = -\frac{e^2}{4\pi\epsilon_0 a_0} \frac{Z^2}{2n^2} = -\frac{1}{2} mc^2 \frac{(Z\alpha)^2}{n^2}$

Fine structure constant: $\alpha = \frac{e^2}{4\pi\epsilon_0\hbar c}$. Bohr radius: $a_0 = 4\pi\epsilon_0\hbar^2/(me^2)$. $|\psi_{nlm}(0)|^2 = \frac{Z^3}{\pi a_0^3 n^3} \delta_l^0 \delta_m^0$

Expected Values, the Virial Theorem and the Gamma Function

Virial Theorem: If $H = T(\mathbf{p}) + V(\mathbf{r})$ and $T(\mathbf{p}) = \mathbf{p}^2/2m$ then $2\langle T \rangle = \langle \mathbf{r} \cdot \nabla V \rangle$

Some expectation values: $\langle \frac{1}{r} \rangle = \frac{Z}{a_0 n^2}$, $\langle \frac{1}{r^2} \rangle = \frac{Z^2}{a_0^2 n^3 (l+1/2)}$

Recursion Relation: $0 = \frac{s}{4} [(2l+1)^2 - s^2] a_0^2 \langle r^{s-2} \rangle - (2s+1)a_0 \langle r^{s-1} \rangle + \frac{s+1}{n^2} \langle r^s \rangle$

Definition: $\Gamma(z) = \int_0^\infty t^{z-1} e^{-t} dt$.

Identities: $\Gamma(n+1) = n!$, $\Gamma(1-z)\Gamma(z) = \frac{\pi}{\sin(\pi z)}$, $\Gamma(z)\Gamma(z+\frac{1}{2}) = 2^{1-2z} \sqrt{\pi} \Gamma(2z)$.

Integrals of 3 Spherical Harmonics, Wigner 3j Symbols and Clebsch Gordan Coefficients

$$\int_0^{2\pi} d\phi \int_0^\pi \sin\theta d\theta \mathcal{Y}_{l_1}^{m_1}(\theta, \phi) \mathcal{Y}_{l_2}^{m_2}(\theta, \phi) \mathcal{Y}_{l_3}^{m_3}(\theta, \phi) = \sqrt{\frac{(2l_1+1)(2l_2+1)(2l_3+1)}{4\pi}} \begin{pmatrix} l_1 & l_2 & l_3 \\ 0 & 0 & 0 \end{pmatrix} \begin{pmatrix} l_1 & l_2 & l_3 \\ m_1 & m_2 & m_3 \end{pmatrix}$$

Wigner 3-j Clebsch Gordan relation: $\begin{pmatrix} j_1 & j_2 & j_3 \\ m_1 & m_2 & m_3 \end{pmatrix} \equiv \frac{(-1)^{j_1-j_2-m_3}}{\sqrt{2j_3+1}} \langle j_1 m_1 j_2 m_2 | j_3 -m_3 \rangle$.

Selection rules for Wigner 3-j Symbol $\begin{pmatrix} l_1 & l_2 & L \\ m_1 & m_2 & -M \end{pmatrix}$ (they are identical to C-G Selection Rules):

$$m_i \in \{-l_i, -l_i+1, \dots, l_i-1, l_i\} \quad m_1+m_2=M \quad |l_1-l_2| \leq L \leq l_1+l_2 \quad l_1+l_2+L \in \mathbb{N}$$

Spherical components of a cartesian vector $\vec{e} = (e_x, e_y, e_z)$: $e_{\pm 1} = \mp \frac{1}{\sqrt{2}} (e_x \pm i e_y)$ and $e_0 = e_z$

Ladder Operators: $\hat{L}_{\pm} = \hat{L}_x \pm i\hat{L}_y$. $\hat{L}_{\pm}|l, m_l\rangle = \hbar\sqrt{l(l+1)-m_l(m_l\pm 1)}|l, m_l\pm 1\rangle$
